

SELF-ASSESSMENT DOSSIER

10 signs your business is vulnerable

65% of serious incidents at Spanish SMEs happen on systems with vulnerabilities that were already known and preventable (INCIBE).
Go through this list honestly: it's your first audit, free.

- ☐ 01 **Reused passwords**
You use the same (or a very similar) password across several company tools.
- ☐ 02 **Former employees still have access**
No one has checked in the last 6 months who still has access to what.
- ☐ 03 **Zero audits**
Your website or systems haven't had a pentest or audit in the past year.
- ☐ 04 **Vendors with no oversight**
You don't know for certain whether your vendors handle customer data in line with GDPR.
- ☐ 05 **Untested backups**
You have backups, but no one has checked whether they could actually be restored today.
- ☐ 06 **Uncontrolled devices**
Any employee can plug their personal USB drive or laptop into the company network.
- ☐ 07 **Unprotected forms**
Your website's forms don't properly encrypt or validate the data they receive.
- ☐ 08 **No incident plan**
If you were attacked tomorrow, no one would know who to call or what to do first.
- ☐ 09 **Leaked credentials**
You haven't checked whether your credentials have already appeared in a known data breach.
- ☐ 10 **GDPR treated as paperwork**
No one in the company could really explain what GDPR requires in practice.

Checked 3 or more? It's time to act, before someone else finds it for you.

NEXT STEP

Tell me which ones you checked.

Reply to this email or message me on WhatsApp with your results and I'll tell you, with no strings attached, what a real attacker could do with that.

Web security audit from €450 • fixed quote, no surprises
